DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John P. Wagner on October 21, 2005.

The application has been amended as follows:

In reference to page 2, line 1, please insert 'computer implemented', after 'A' and before 'method'.

REASONS FOR ALLOWANCE

2. Claims 1-24 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:
The prior art, U.S Patent No. 2002/0103841A1, to Thompson, teaches user selected reference dictionaries to determine which words or phrases populate the list of non-reference words. The reference words used by Thompson are supplied by which previously created dictionary the user chooses. Furthermore, the reference teaches that if a document comprises a given percentage of unrecognized words, it is not processed. Finally, Thompson provides an algorithm to produce possible solutions to invalid terms found within the document from which the user could build "user generated" dictionaries. The correction methods fail to suggest all of the an edit-distance algorithm to create an approximate duplicate list and filtering said approximate duplicates list to

create a thesaurus of standard words and phrases and their variations. Finally, the reference fails to suggest editing said selected group of documents with an editor operable to use said thesaurus to replace a word or phrase on said approximate duplicates list with said standard words and phrases.

In reference to independent claims 1, 9, and 17, the claimed features of comparing said list of reference words and phrases with a joined list containing said reference words and phrases and said non-reference words and phrases, using an edit-distance algorithm to create an approximate duplicates list, filtering said approximate duplicates list to create thesaurus of standard words and phrases and their variations, and editing said selected group of documents with an editor operable to use said thesaurus to replace a word or phrase on said approximate duplicates list with said standard words and phrases, is not shown in the prior art of record and would not have been obvious to one of ordinary skill in the art to have utilized the prior art of record to come up with applicant's claimed invention.
